Figure S1. Flow cytometric analysis of Hela cells after treated with LIP2000-siRNA and HT-TCS-FAM-siRNA NPs in the presence of varying serum concentrations: 0, 10, 20, and 50 vol% for 4 h. Quantification of (A) FAM-siRNA positive cells and (B) intracellular fluorescence intensity (n=3). The final concentration of siRNA is 60 nM. ***p < 0.001, **p < 0.01, *P < 0.05.
