Determination of short-chain fatty acids in feces by capillary electrophoresis with indirect UV-VIS detection

Ondřej Hodek, Tomáš Křížek

Fig. 1S Electropherograms of the 0.1 mM SCFA standard mixture measured at (A) pH 4.0, (B) pH 8.2 (C) pH 5.7. BGE: 10 mM β-Ala + 10 mM benzoic acid with 0.5 mM CTAB. U = –20 kV. Peak assignment: 1 – acetic acid, 2 – system peak, 3 – propionic acid, 4 – isobutyric acid, 5 – butyric acid.
