Supporting Information

Table of Contents

Fig. S1. Simulated and experimental PXRD traces of polycrystalline 1 at 100 K and 298 K. ........2
Fig. S2. CV of poly-1 and poly-2 in monomer-free electrolyte solution in CH₂Cl₂. Insets show the linear relationship between current at peak oxidation/reduction potentials and scan rates. All potentials are reported with referenced to Fc/Fc⁺ couple as 0 V. ..........................................................3
Fig. S3. Deconvoluted (a) N 1s, (b) S 2p, (c) P 2p and (d) I 3d XPS spectra of poly-1 on ITO coated glasses...................................................................................................................................4
Fig. S4. Deconvoluted (a) N 1s, (b) S 2p and (c) Ir 4f XPS spectra of poly-2 on ITO coated glasses. .............................................................................................................................................5
Fig. S5. (a) Stacked molar absorptivity traces of L (black line), 1 (red line) and 2 (blue line) in CH₂Cl₂. (b) Stacked emission traces of L (3.1 µM, black line), 1 (3.0 µM, red line) and 2 (3.0 µM, blue line) in CH₂Cl₂, ..................................................................................................................6
NMR Spectra of 1 and 2.........................................................................................................................7-10
Fig. S1. Simulated and experimental PXRD traces of polycrystalline 1 at 100 K and 298 K.
Fig. S2. CV of poly-1 and poly-2 in monomer-free electrolyte solution in CH$_2$Cl$_2$. Insets show the linear relationship between current at peak oxidation/reduction potentials and scan rates. All potentials are reported with referenced to Fc/Fc$^+$ couple as 0 V.
Fig. S3. Deconvoluted (a) N 1s, (b) S 2p, (c) P 2p and (d) I 3d XPS spectra of poly-1 on ITO coated glasses.
Fig. S4. Deconvoluted (a) N 1s, (b) S 2p and (c) Ir 4f XPS spectra of poly-2 on ITO coated glasses.
Fig. S5. (a) Stacked molar absorptivity traces of \( L \) (black line), 1 (red line) and 2 (blue line) in \( \text{CH}_2\text{Cl}_2 \). (b) Stacked emission traces of \( L \) (3.1 \( \mu \)M, black line), 1 (3.0 \( \mu \)M, red line) and 2 (3.0 \( \mu \)M, blue line) in \( \text{CH}_2\text{Cl}_2 \).
