Supplementary table 2 – Average hydrodynamic particle size (n =3), presented as intensity distribution, of each nanomaterial tested (SiNC, SiNC-DCOIT, SiNC-Ag and SiNC-DCOIT-Ag) dispersed in low and high ionic strength media (ultra-pure water and artificial saltwater, respectively) in time (0, 24 and 48 h). Zeta potential values values (ζP . mV) are also provided for UP water. SD – standard deviation.

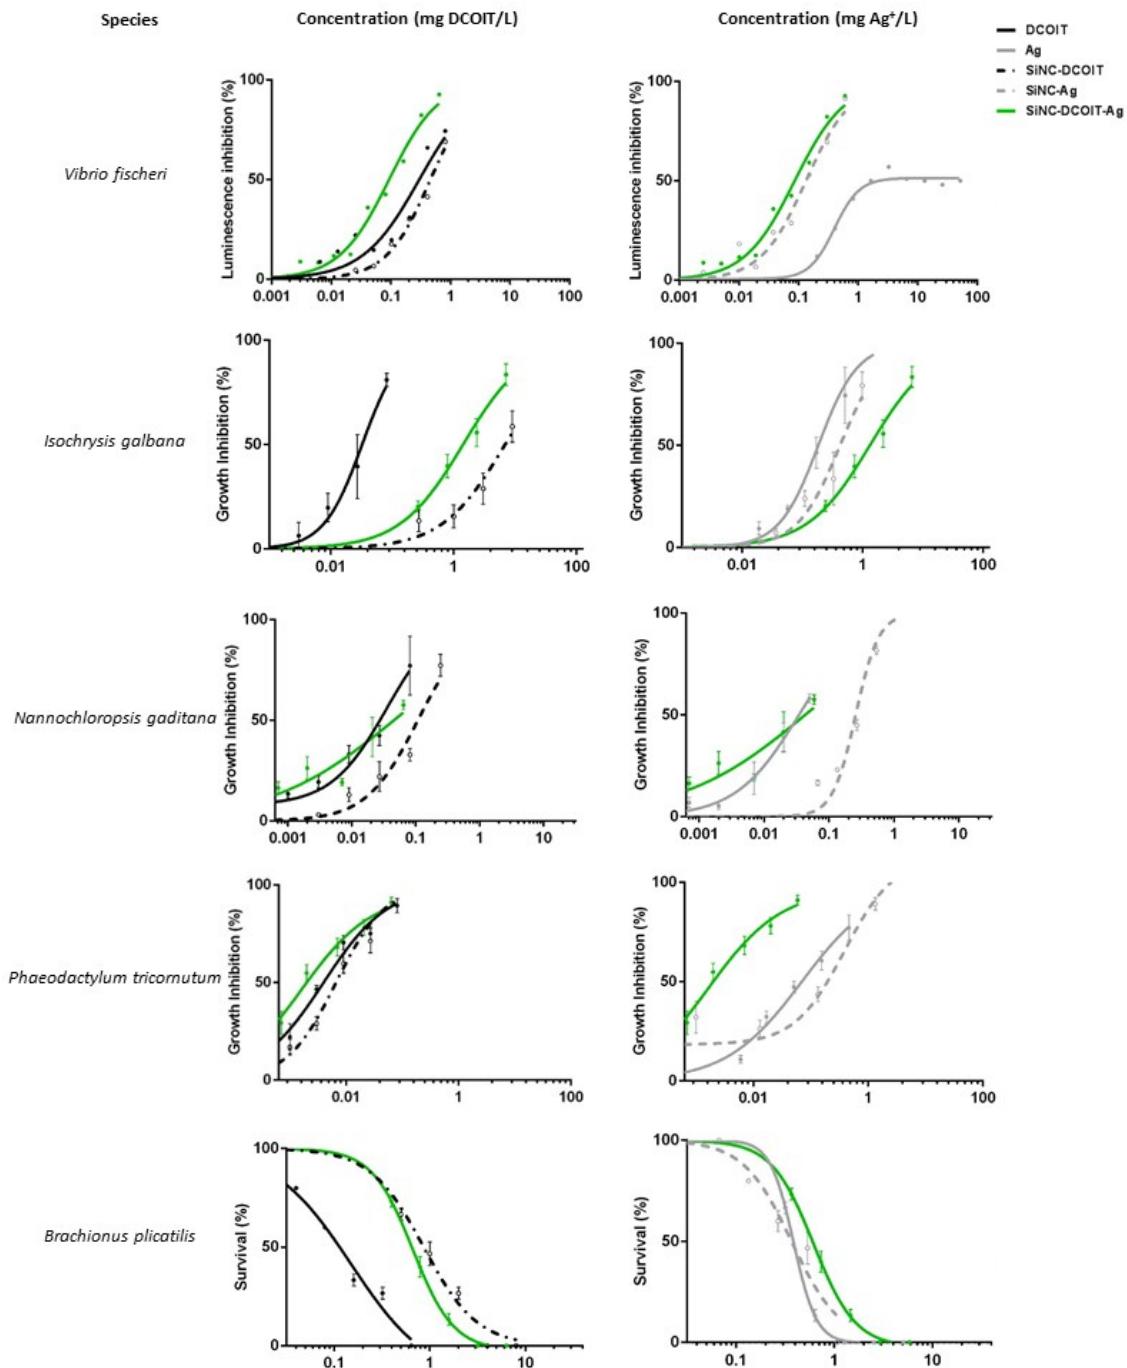

Supplementary figure 1 – Nanoparticles size frequency histograms based on SEM measurements of (a) empty SiNC, (b) SiNC with DCOIT encapsulated, (c) SiNC coated with silver and (d) SiNC with DCOIT encapsulated and coated with silver.

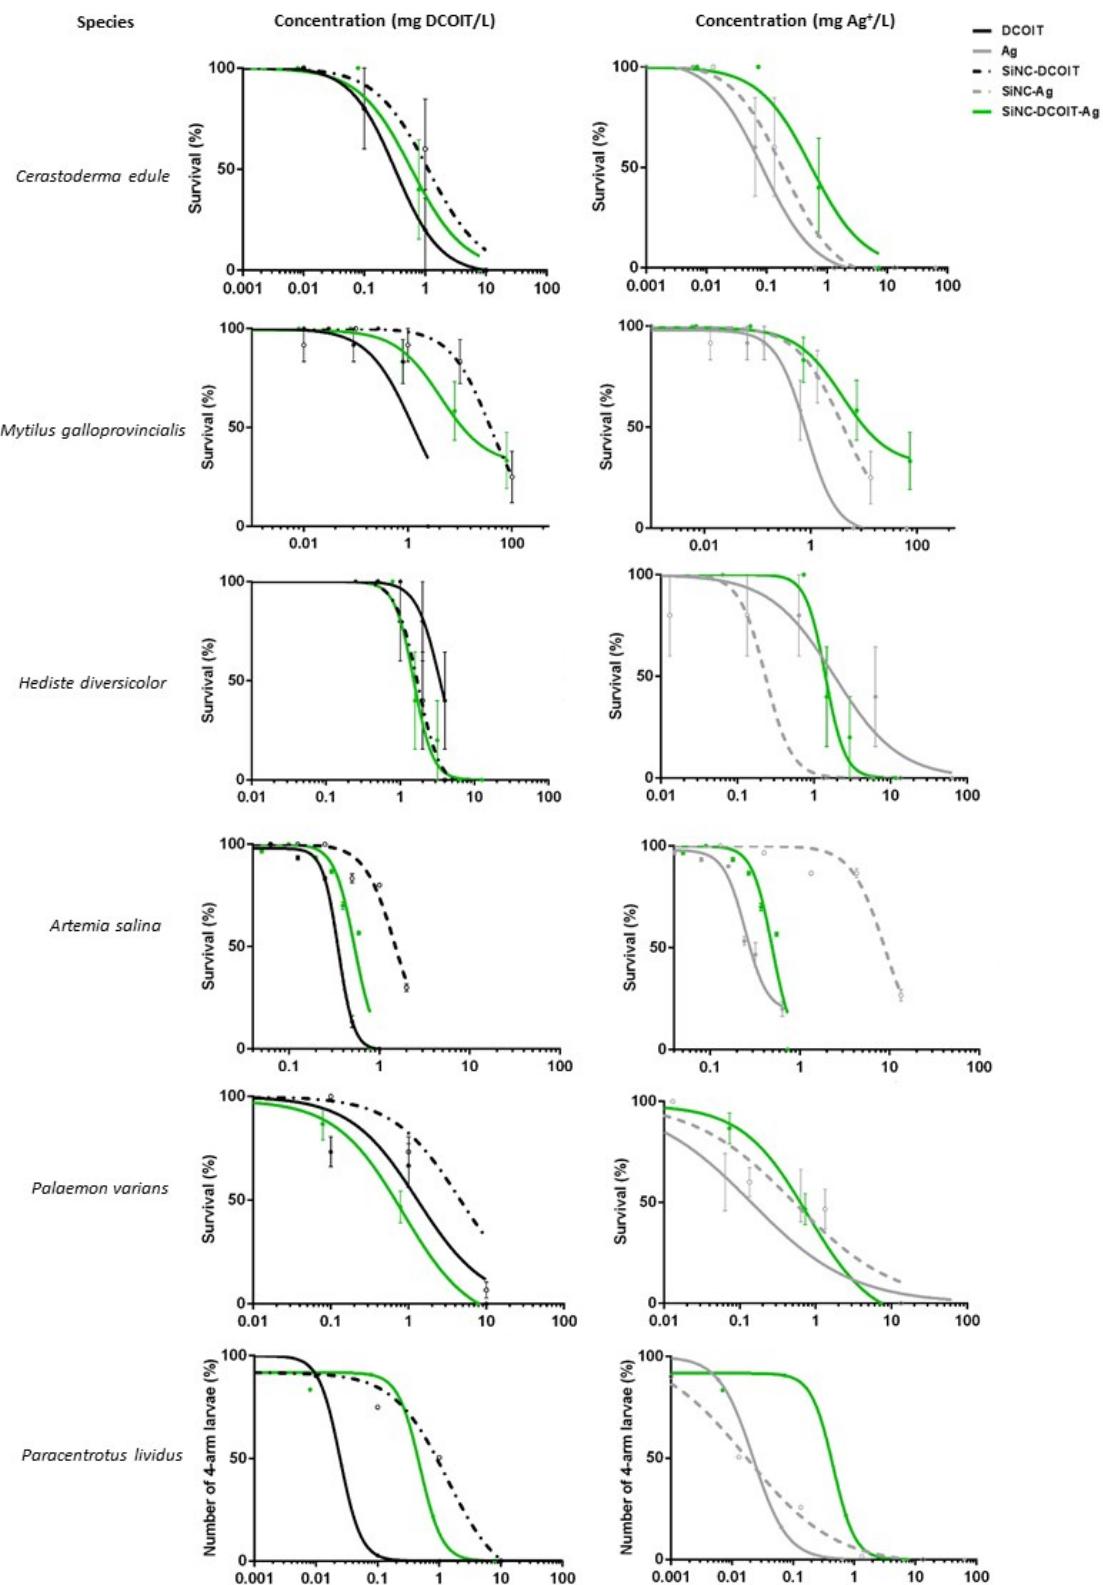

Supplementary figure 2 – FTIR spectrum of SiNC, DCOIT, SiNC-DCOIT, and SiNC–DCOIT-Ag.

Supplementary figure 3 – Energy Dispersive X-Ray Spectroscopy (EDS) of SiNC-DCOIT-Ag, showing the presence of Si and O (present in the SiNC), Ag (regarding the coating with silver) and Cl (representative of DCOIT).

Supplementary figure 4 – Dose-response curves of the bacteria *Vibrio fischeri* luminescence inhibition, growth inhibition of three photosynthetic species and rotifer *Brachionus plicatilis* survival exposed to: (left) – DCOIT, SiNC-DCOIT and SiNC-DCOIT-Ag (both expressed as mg of DCOIT content/L); (right) Ag, SiNC-Ag and SiNC-DCOIT-Ag (both expressed as mg of Ag content/L). Data are presented as mean percentage values ± standard error.

Supplementary figure 5 – Dose-response curves of invertebrate species survival (bivalves *Cerastoderma edule* and *Mytilus galloprovincialis*; polychaete *Hediste diversicolor*; crustaceans *Artemia salina* and *Palaemon varians*) and the echinoderm *Paracentrotus lividus* 4-arm larvae formation exposed to: (left) – DCOIT, SiNC-DCOIT and SiNC-DCOIT-Ag (both expressed as mg of DCOIT content/L); (right) Ag, SiNC-Ag and SiNC-DCOIT-Ag (both expressed as mg of Ag content/L). Data are presented as mean percentage values \pm standard error.
