Electronic Supplementary Information

A Randomized, Double-Blind, Placebo-Controlled Pilot Study to Assess Bacterial Anti-Adhesive Activity in Human Urine Following Consumption of a Cranberry Supplement

Haiyan Liu¹, Amy B. Howell², Derek J. Zhang¹, Christina Khoo¹*

Figure S1. (A) Specific labeling of E. coli UTI89 increased with BacLight Green concentration. The optimum BacLight Green concentration was determined as 1000 μM. (B) Specific binding of fluorescent-labeled E. coli UTI89 to uroepithelial cells with increasing ratios of E. coli UTI89:uroepithelial cells. The optimum ratio was determined as 600:1.
