1. General information

Solvents, nickel catalyst, TBHP oxidant, aromatic aldehyde and aniline derivatives were purchased from Merck and Sigma. Other reagents were purchased from commercial distributors and used without further purification. Acetanilide derivatives were synthesized in accordance with the literatures. Analytical thin layer chromatography (TLC) was performed with pre-coated silica gel 60 F254 plates. The products were purified by flash column chromatography on silica gel (0.063–0.200 mm; Merck). $^1$H and $^{13}$C NMR Spectra were recorded with a Bruker 500 Advance instrument in CDCl$_3$ and DMSO-d6. Mass spectrometry was obtained with an Agilent 5975C VL MSD (Ion source: EI+, 70 eV, 230 °C). Gc-MS analysis was performed on an Agilent Gc 7890A (Column: Rtx 5 MS, length=30m, I.D=0.250 mm, Film thickness=25 µm) and 5975C VL MSD (Ion source: EI+, 70 eV, 230 °C). Temperature program: initial temperature=40 ºC, initial time=2 min, program rate=5 ºC/min, final temperature=270 ºC, final time=2 min, split ratio=50 mL/min and flow rate=1 mL/min. Conditions: 1. injection port temperature: 230 °C, 2. ion source temperature: 230 °C, 3. carrier gas: He 99.999%, 4. sample volume: 0.5 µL

2. Typical procedure for the synthesis of N-Acetyl-N-phenylbenzamides.

A 10 mL microwave vial was charged with acetanilide derivatives (1 equiv, 0.5 mmol), benzaldehyde derivatives (3 equiv, 1.5 mmol), KBr (1.0 equiv., 60 mg), TBHP (70% aq. solution, 1.5 mmol, 193 mg) and DCM (2.0 mL). The vial was then stirred at room temperature, for 12 h. After this time the reaction mixture was diluted with water (5 mL) and the aqueous phase was extracted with dichloromethane (3 × 5 mL). The organic extracts were combined and washed with saturated solution of NaHCO$_3$ (3 × 5 mL). Next, the organic phase was dried over sodium sulfate and filtered. Concentration of the solution by rotary evaporation under reduced pressure gave a residue which was purified by using flash column chromatography ($n$-hexane: EtOAc, 10:1) to yield the desired products.
