Monomer Synthesis

The obtained BPDA monomers are abbreviated to xx-BPDA where xx denotes the type of diamine used: e.g. BPDA with 1,8-octanediame is abbreviated as C₈-BPDA, BPDA with trans-1,4-cyclohexanediame is abbreviated as t-CH-BPDA. The synthesis to obtain BPDA monomers is divided in two synthesis pathways. Either via itaconic acid (Error! Reference source not found., R = H), or via dimethyl itaconate (Error! Reference source not found., R = CH₃) to obtain BPDA monomers with free acid, or dimethyl-ester functionality. The only exception is the synthesis of p-Ph-BPDA-dm, which was obtained via methylation of p-Ph-BPDA. The monomer synthesis results are shown in Error! Reference source not found., the synthesis details and characterization of novel monomers are described below.

Synthesis of t-CH-BPDA

Itaconic acid (9.11 gr, 0.07 mol) and trans-1,4-cyclohexanediame (1.14 gr, 0.01 mol) were loaded in a 100 mL round-bottom flask. The reaction mixture was stirred at 170 °C for 2-6 hours in the melt, or until the reaction mixture was fully solidified. Recrystallization from hot water yielded the product as white solids (2.1 gr, 62% yield). ¹H NMR (CDCl₃, 300 MHz): δ 4.03 (m, 2.06H), 3.82 (m, 3.93 H), 3.48 (p, 2.0H), 3.02 (d, 3.95 H), 1.91 (m, 3.96H), 1.68 (m, 3.90H). ¹³C NMR (CDCl₃, 300 MHz): δ 178.4, 175.2, 162.5, 162.0, 161.4, 160.0, 51.0, 45.9, 35.8, 34.0, 27.7.

Synthesis of t-CH-BPDA-dm

Dimethyl itaconate (79.6 gr, 0.5 mol) and trans-1,4-cyclohexanediame (25 gr, 0.22 mmol) were dissolved in 30 mL of methanol in a 250 mL round-bottom flask, equipped with a magnetic stirring bar. The reaction mixture was stirred at reflux overnight, and the product could directly be obtained as white crystals after cooling of the reaction mixture (72.5 gr, 90% yield). ¹H NMR (CDCl₃, 300 MHz): δ 3.97 (m, 2.0H), 3.75 (s, 6.01H), 3.54 (m, 4.38H), 3.22 (p, 2.06H), 2.68 (m, 4.29H), 1.80 (m, 4.22H), 1.59 (m, 4.21H). ¹³C NMR (CDCl₃, 300 MHz): δ 173.2, 172.0, 52.5, 49.4, 44.9, 36.2, 34.6, 28.4.

Synthesis of c-CH-BPDA

Itaconic acid (7.8 gr, 60 mmol) and cis-1,4-cyclohexanediame (2.78 gr, 28.8 mmol) were loaded in a 100 mL round-bottom flask. The reaction mixture was stirred at night at 130 °C. Recrystallization from boiling water yielded the product as brown solids (yield: n.d.).

Synthesis of c-CH-BPDA-dm

Dimethyl itaconate (9.31 gr, 2.18 mmol) and cis-1,4-cyclohexanediame (3.09 gr, 27.05 mmol) were dissolved in 30 mL of methanol in a 100 mL round-bottom flask, equipped with a magnetic stirring bar. The reaction mixture was stirred at reflux overnight to yield a viscous orange oil. The product was isolated after column chromatography (MeOH:CHCl₃ 1:19v%, RF 0.48) as a yellow oil. (5.73 gr, 63% yield). ¹H NMR (CDCl₃, 300 MHz): δ 3.96 (m, 2.0H), 3.69 (s, 6.0H), 3.65 (m, 3.84H), 3.16 (p, 2.0H), 2.63 (d, 3.98H), 1.82 (m, 3.95H), 1.64 (m, 4.16H). ¹³C NMR (CDCl₃, 300 MHz): δ 173.3, 172.3, 52.5, 48.1, 47.3, 36.4, 34.5, 30.0.

Synthesis of t-CP-BPDA

Itaconic acid (2.71 gr, 20.9 mmol) and trans-1,3-cyclopentanediame (0.97 gr, 9.65 mmol) were loaded in a 100 mL round-bottom flask. The reaction mixture was stirred at night at 130 °C. Recrystallization from boiling water yielded the product as white solids (2.74 gr, 88% yield).

Synthesis of t-CP-BPDA-dm

Dimethyl itaconate (8.98 gr, 56.8 mmol) and trans-1,3-cyclopentanediame (2.74 gr, 27.4 mmol) were dissolved in 30 mL of methanol in a 100 mL round-bottom flask, equipped with a magnetic stirring bar. The reaction mixture was stirred at reflux overnight to yield a viscous orange oil. The product was isolated after column chromatography (MeOH:CHCl₃ 3:97v%) as a yellow oil. (5.12 gr, 53% yield). ¹H NMR (CDCl₃, 300 MHz): δ 3.97 (m, 2.0H), 3.75 (s, 6.01H), 3.54 (m, 4.38H), 3.22 (p, 2.06H), 2.68 (m, 4.29H), 1.80 (4.22H), 1.59 (m, 4.21H). ¹³C NMR (CDCl₃, 300 MHz): δ
Synthesis of c-CP-BPDA

Itaconic acid (2.57 gr, 19.8 mmol) and cis-1,3-cyclopentanediamine (0.98 gr, 9.77 mmol) were loaded in a 100 mL round-bottom flask. The reaction mixture was stirred overnight at 130 °C. Recrystallization from boiling water yielded the product as white solids (2.85 gr, 90% yield).

Synthesis of c-CP-BPDA-dm

Dimethyl itaconate (9.84 gr, 60 mmol) and cis-1,3-cyclopentanediamine (2.87, 28.7 mmol) were dissolved in 30 mL of methanol in a 100 mL round-bottom flask, equipped with a magnetic stirring bar. The reaction mixture was stirred at reflux overnight to yield a viscous orange oil. The product was isolated after column chromatography (MeOH:CHCl₃ 3:97v%) as a yellow oil. (5.59 gr, 55 yield).

\[ ^1H \text{NMR (CDCl}_3, 300 MHz): \delta 4.66 (p, 1.86H), 3.75 (s, 6.0H), 3.60 (d, 3.95H), 3.23 (p, 1.97H), 2.70 (m, 4.0H), 2.0 (1.90H), 1.86 (m, 2.60H), 1.61 (m, 1.78H). \]

\[ ^13C \text{NMR (CDCl}_3, 300 MHz): \delta 173.2, 172.2, 52.5, 50.8, 45.5, 36.1, 34.7, 31.0, 26.9. \]

Synthesis of p-Ph-BPDA

Itaconic acid (7.83 gr, 60.2 mmol) and para-phenylenediamine (3.25 gr, 30.1 mmol) were loaded in a 100 mL round-bottom flask. The reaction mixture was stirred overnight at 130 °C. Recrystallization from boiling water yielded the product as white solids (11.5 gr, 99% yield).

\[ ^1H \text{NMR (CDCl}_3, 300 MHz): \delta 7.55 (s, 4.0H), 4.26 (m, 4.04H), 3.60 (p, 2.09H), 3.20 (d, 4.0H). \]

\[ ^13C \text{NMR (CDCl}_3, 300 MHz): \delta 178.3, 162.5, 161.9, 161.3, 160.7, 135.4, 123.4, 51.7, 35.7, 34.6. \]

Synthesis of p-Ph-BPDA-dm

P-Ph-BPDA (5.1 gr, 15.3 mmol) was suspended in 100 mL of methanol with 2 mL of sulfuric acid in a 250 mL round-bottom flask. The suspension was refluxed for 72 hours, the methanol and formed water were removed in vacuo, the obtained product was re-suspended in 100 mL of methanol and refluxed for another 18 hr. The suspension was a grey slurry in deep purple liquid. After cooling, the product could be isolated as a grey solid by filtration (4.45 gr, 81% yield).

\[ ^1H \text{NMR (CDCl}_3, 300 MHz): \delta 7.54 (s, 4.0H), 3.99 (m, 4.15H), 3.72 (s, 5.97H), 3.31 (p, 2.16H), 2.84 (m, 4.19H). \]

Synthesis of m-Xy-BPDA-dm

Dimethyl itaconate (20.7 gr, 130.9 mmol) and meta-xylylenediamine (8.7 gr, 63.9 mmol) were dissolved in 30 mL of methanol in a 100 mL round-bottom flask, equipped with a magnetic stirring bar. The reaction mixture was stirred at reflux overnight to yield a viscous orange oil. The product was isolated after column chromatography (MeOH:CHCl₃ 7:93v%) as a yellow oil (yield 77%).

Synthesis of p-Xy-BPDA

Itaconic acid (7.22 gr, 55.5 mmol) and para-xylylenediamine (3.78 gr, 27.7 mmol) were loaded in a 100 mL round-bottom flask. The reaction mixture was stirred overnight at 130 °C. Recrystallization from boiling water yielded the product as white solids (yield n.d.).

Synthesis of p-Xy-BPDA-dm

Dimethyl itaconate (20.4 gr, 128.7 mmol) and para-xylylenediamine (8.8 gr, 61.3 mmol) were dissolved in 30 mL of methanol in a 100 mL round-bottom flask, equipped with a magnetic stirring bar. The reaction mixture was stirred at reflux overnight, and the product could directly be obtained as white crystals after cooling of the reaction mixture (17.5 gr, 74% yield).

\[ ^1H \text{NMR (CDCl}_3, 300 MHz): \delta 7.22 (2, 4.0H), 4.45 (m, 4.07H), 3.73 (s, 6.0H), 3.48 (m, 3.83H), 3.23 (p, 2.03H), 2.76 (m, 4.08H). \]

IR analysis of BPDA-based polyesters

Infra-red analysis was performed on the polymers based on p-Ph-BPDA(-dm) and t-CH-BPDA(-dm), reported in Table 3 and Table 4 of the manuscript, whereas the results are shown in Figures 46 and 47. In general we can detect the presence of the pyrrolidone ring by the resonances around $1420 \text{ cm}^{-1}$ (t-CH-BPDA) or $1390 \text{ cm}^{-1}$ (p-Ph-BPDA) and $1680 \text{ cm}^{-1}$, corresponding to the vibration of the tertiary amide group in the pyrrolidone ring and the carbonyl stretch of the pyrrolidone amide. Similarly, the carbonyl stretch of the carboxylic ester is observed at around $1750 \text{ cm}^{-1}$. Lastly, the presence of the phenyl ring in the p-Ph-BPDA(-dm) based polymers (Figure 47) is detected by the vibration of the aromatic ring around 820 and 1520 cm$^{-1}$.

Figure 46. IR spectra for t-CH-BPDA-dm based polyesters, collected at room temperature. Poly([t-CH-BPDA]-C$_6$) (black), poly([t-CH-BPDA]-C$_8$) (red), Poly([t-CH-BPDA]-C$_{10}$) (green), and poly([t-CH-BPDA]-C$_{12}$) (blue).
DSC analysis of BPDA-based polyesters
