1. General Information

Except noted otherwise, all reactions were carried out in Schlenk tubes. Reagents and solvents were obtained from commercial sources and used without further purification. The $^1$H and $^{13}$C spectra were recorded on a Brucker ADVANCE III spectrometer at 400 MHz and 100 MHz, and chemical shifts were reported in parts per million (ppm). Flash column chromatography was performed using silica gel of 300-400 μm. The GC-MS results were recorded on a GC-MS QP2010 equipment, GC analysis was performed on GC 2010 Plus. The electron ionization (EI) method was used for HRMS measurement, and the mass analyzer type is TOF for EI. The HRMS (EI) was recorded on an Esquire 3000 plus instrument.

2. General Procedures

![Chemical Reaction]

In a Schlenk tube of 25 mL, acetophenone 1 (0.5 mmol, 1.0 equiv.), aniline 2a (0.5 mmol, 1.0 equiv.), CuCl$_2$ (0.1 mmol, 0.2 equiv.), Phen (1,10-Phenanthroline monohydrate, 0.1 mmol, 0.2 equiv.), PhCOOK (0.5 mmol, 1.0 equiv.) and DTBP (2 mmol, 4 equiv.) were dissolved in DMF (2 mL). The mixture was stirred at 120 ºC for 36 h under O$_2$ atmosphere. After completion of the reaction, the resulting solution was cooled to room temperature; the solution was diluted with ethyl acetate (10 mL), washed with water (5 mL), extracted with ethyl acetate (3×5 mL), and dried over anhydrous Na$_2$SO$_4$ and concentrated in vacuo. The crude product was purified by flash column chromatography on silica gel to give the desired product.
