$J_{\text{NH}}$ = 88.63 Hz
Figure 17S: (A) A plot of \(\text{sign}(\lambda_2(r))\rho(r)\) as function 1 vs. the RDG as function 2, and (B) a coloured isosurface plot (the green colour denotes a weak HB, the dark green colour denotes a strong HB and the red colour represents the steric effect) for the molecules, 1–4 plotted using VMD programme.
**Figure 18S:** Visualization of the BCPs and the bond paths of the HBs for the molecules, 1–4, plotted using multiwfn software. The dots represent the CPs and the thin bars represent the path between two interacting atoms passing through the BCP of the HB interactions.
