**General Methods.** All the experiments were carried out under a nitrogen atmosphere.  $^1\text{H}$  and  $^{13}\text{C}$  NMR spectra were recorded in  $\text{CDCl}_3$  solutions using a JEOL JNM-A400II spectrometer (400 or 100 MHz) and  $\text{Me}_4\text{Si}$  or residual protiated solvent as an internal standard. High-resolution mass spectra were obtained on a JEOL JMS-DX303. GC analyses were performed on a Hitachi G-3500 instrument equipped with a glass column (OV-101 on Uniport B, 2 m). 1,2-Di-*tert*-butyl-1,1,2,2-tetrafluorodisilane,<sup>1</sup> methyl 3-thiophenecarboxylate,<sup>2</sup> 1-triisopropylsilylpyrrole,<sup>3</sup> 1-triisopropylsilylindole,<sup>4</sup>  $[\text{Ir}(\text{OMe})(\text{COD})]_2$ ,<sup>5</sup> 2,9-dibutyl-1,10-phenanthroline,<sup>6</sup> 2,9-di-*tert*-butyl-1,10-phenanthroline,<sup>6</sup> and 2-*tert*-butyl-1,10-phenanthroline<sup>7</sup> were synthesized by the reported procedures. 2,9-Diisopropyl-1,10-phenanthroline and 2-isopropyl-1,10-phenanthroline were prepared by the methods similar to those for 2,9-di-*sec*-butyl-1,10-phenanthroline<sup>8</sup> and 2-*sec*-butyl-1,10-phenanthroline,<sup>9</sup> respectively. Octane and hetroarenes were purified by distillation from appropriate drying agents. All of other compounds were used as received.
