Figure S1. FESEM (a) and TEM (b) images of left-handedly coiled tubular ribbons and tube-in-tube structures.
Figure S2. TEM images of the reaction mixture at different reaction time. (a) 45 s and (b) 90 s (Preparation condition: 20 mg of 12K, 2.2 mL of H$_2$O, 1.8 mL of EtOH, 40 mg of TMAPS); (c) 180 s and (d) 460 s (Preparation condition: 20 mg of 12K, 2.2 mL of H$_2$O, 1.8 mL of EtOH, 10 mg of 1-propylamine, and 30 mg of BTEB). Scale bar length: (a) and (b) are 0.2 μm; (c) and (d) are 1.0 μm.
