Synthesis of 1

To a coumarin 334 (100 mg, 0.35 mmol) in ethanol (3.0 mL) was added 4-methoxyphenylhydrazine (310 mg, 0.18 mmol). The reaction solution was stirred at room temperature for 12 hr. After filtration, the solid was washed with pure Ethanol and water. The product was obtained as a red solid in 54.6% yield. m.p. : 153.0 ~ 155.4°C

Determination of the detection limit of 1 for Cu$^{2+}$

The detection limit of 1 for Cu$^{2+}$ was estimated from plot of normalized fluorescence changes of 1 verse Log[Cu$^{2+}$] using a equation (1).

\[
\frac{F - F^0}{F^0} = 10^{\frac{-Slope}{Intercept}}
\]
