1. Materials

Unless stated otherwise, all reagents and chemicals were obtained from commercial sources and used without further purification. THF and THP were distilled from benzophenone and sodium prior to use.

(3-Cyanophenyl)diphenylgermane, and (4-aminophenyl)diphenylgermane were prepared according to palladium-catalyzed single arylation of diphenylgermane with aryl iodide. [(Dimethylsilyl)methyl]dimethylgermane was prepared according to the literature. Material identity and purity was confirmed by 1H & 13C NMR, EI-MS and elemental analysis or HRMS.

(4-Aminophenyl)diphenylgermane: To a solution of Pd(P(tBu)3)2 (0.48 g, 0.93 mmol) in THF (20 mL) were added 4-iodoaniline (4.56 g, 20.8 mmol), diisopropylethylamine (5.0 mL, 28.3 mmol), and diphenylgermane (12.0 mL, 64.0 mmol). After stirring for 9 d at room temperature, the reaction mixture was quenched with water, extracted three times with CH2Cl2, and dried over Na2SO4. The solvent was evaporated under reduced pressure, and column chromatography produced (4-aminophenyl)diphenylgermane (2.73 g, 41%) as colorless oil.
