Experimental Section

General procedure for the coupling of aromatic and heteroaromatic esters with alkenes catalyzed by ruthenium complex.
A 25-mL two-neck round bottom flask or a 15-mL pressure tube containing [{RuCl\(_2\)(\(\rho\)-cymene)}\(_2\)] (0.03 mmol, 3 mol %), AgSbF\(_6\) (0.20 mmol, 20 mol %) and Cu(OAc)\(_2\) (0.30 mmol, 30 mol %) was evacuated and purged with nitrogen gas three times (Silver salt is moisture sensitive. Thus, the reaction mixture was purged with nitrogen gas). To the flask or tube were then added esters (1) (1.00 mmol), alkenes 2 (2a and 2b, 3.0 mmol and 2c-g, 2.0 mmol) and THF or 1,2-dichloroethane (4.0 mL) via syringes and allowed the reaction mixture to stir at room temperature for 5 min. Then, the reaction mixture was allowed to stir at 100 °C for 12 h under open atmosphere (for a 15-mL pressure tube, a screw cap was used to cover the tube. This reaction is moisture-insensitive). After cooling to ambient temperature, the reaction mixture was diluted with CH\(_2\)Cl\(_2\), filtered through Celite and silica gel, and the filtrate was concentrated. The crude residue was purified through a silica gel column using hexanes and ethyl acetate as eluent to give pure 3. The reaction worked equally in both reaction setups. The pressure tube reaction is advisable in order to avoid the solvent evaporation and get more yields.

General procedure for de-esterification reaction.
A two-neck 50 mL round bottom flask fitted with a condenser containing a mixture of 3c or 3j (100 mg) and LiOH (1.0 equiv) in 6 mL of THF/MeOH/H\(_2\)O (4:1:1). The reaction mixture was refluxed at 80 °C for 12 h. After the reaction, reaction mixture was allowed to cool to room temperature and the reaction mixture was neutralised (pH = 6) using 1N HCl. The product was extracted with ethyl acetate, washed with water and brine. The extract was dried with anhydrous Na\(_2\)SO\(_4\). The solvent was removed under reduced pressure and the crude residue was purified through a silica gel column using hexanes and ethyl acetate as eluent to give pure 4.
Spectral data and copies of \(^1\)H and \(^{13}\)C NMR spectra of all compounds 3a-y, 4a and 4b are listed below (pages 16 – 65).
