Instrumentation and Materials

$^1$H NMR, $^{11}$B NMR and $^{13}$C NMR spectra were recorded on a JEOL JNM-ECX400 spectrometer at ambient temperature using tetramethylsilane as an internal standard. High-resolution ESI-TOF-MS was measured on a JEOL JMS-700 spectrometer. UV-vis spectra were measured on a JASCO UV/VIS/NIR Spectro-photometer V-570. Fluorescence spectra were measured on a JASCO FP-6600. Fluorescence quantum yields were measured on an Absolute PL Quantum Yield Measurement System C9920-02.

Materials

Thin-layer chromatography (TLC) and gravity column chromatography were performed on Art. 5554 (Merck KGaA), and Silica Gel 60N (Kanto Chemical Co.), respectively. All solvents and chemicals were reagent grade quality, obtained commercially and used without further purification. For spectral measurements, spectral grade were purchased from Nacalai tesque Inc.

X-ray Analysis. X-ray crystallographic data were recorded on a Rigaku R-AXIS RAPID/S. The diffraction data were processed with Crystal Structure of the Rigaku program, solved with the SIR-97 program$^1$ and refined with the SHELX-97 program.$^2$

Theoretical calculations

All density functional theory calculations were achieved with the Gaussian09 program package. The geometry was fully optimized at the Becke’s three-parameter hybrid functional combined with the Lee-Yang-Parr correlation functional abbreviated as the B3LYP level of density functional theory with 6-31G** basis set. Equilibrium geometries were verified by the frequency calculations, where no imaginary frequency was found. Based on the B3LYP/6-31G** optimized geometry, time dependent density functional theory (TDDFT) was conducted at the B3LYP/6-31G** level of theory.
Synthesis

Synthesis of 2•BF$_4$

To a mixture of 1$^{S3}$ (20 mg, 0.045 mmol) in toluene (2 ml) was added BPhCl$_2$ (0.4 ml) under an Ar atmosphere. After stirring for 5 h, the reaction was quenched with MeOH and the solvent was removed under a reduced pressure. The residue was purified by silica gel column chromatography (10% MeOH in CHCl$_3$) to give 2•Cl. AgBF$_4$ (100 mg) then was added to 2•Cl in CH$_2$Cl$_2$ (5 ml). The appeared precipitate was filtrated, and the filtrate was purified by recrystallization from MeOH/H$_2$O to give 2•BF$_4$ as yellow solids. Yield: 91% (25 mg, 0.041 mmol). $^1$H NMR (400 MHz, CDCl$_3$): δ 9.94 (s, 2H, meso), 9.87 (s, 2H, meso), 6.26 (m, 1H, $^p$Ph), 5.99 (m, 2H, $^m$Ph), 3.82-3.64 (m, 8H), 6.53 (s, 6H, -Me), 3.22 (m, 2H, $^m$Ph), 2.01 (m, 4H), 1.71 (t, 6H, $J = 7.3$ Hz), 1.59 (m, 4H), 1.02 (t, 6H, $J = 7.3$ Hz) (ppm); $^{11}$B NMR (128 MHz, CDCl$_3$): δ -14.2 (ppm); $^{13}$C NMR (125 MHz, CDCl$_3$): δ 150.5, 146.8, 145.2, 144.6, 144.1, 141.6, 126.8, 126.6, 120.1, 107.9, 34.5, 25.7, 22.9, 19.2, 17.7, 14.1, 11.5 (ppm); HRMS (ESI-TOF): calcd for C$_{36}$H$_{43}$BN$_3$ [M-BF$_4$]$^+$ 527.3586, found 527.3589.

Synthesis of 4•BF$_4$
To a mixture of 3\(^{54}\) (25 mg, 0.036 mmol) in toluene (10 ml) was added BPhCl\(_2\) (0.3 ml) under an Ar atmosphere. After stirring for 5 h, the reaction was quenched with MeOH and the solvent was removed under a reduced pressure. The residue was purified by silica gel column chromatography (10% MeOH in CHCl\(_3\)) to give 4•Cl. AgBF\(_4\) (100 mg) then was added to 2•Cl in CH\(_2\)Cl\(_2\) (5 ml). The appeared precipitate was filtrated, and the filtrate was purified by recrystallization from CHCl\(_3\)/hexane to give 4•BF\(_4\) as purple solids.

Yield: 85% (26 mg, 0.030 mmol) \(^1\)H NMR (400 MHz, CDCl\(_3\)): \(\delta\) 8.14 (m, 2H, -Ph), 8.05-7.96 (m, 10H, -Ph), 7.77 (m, 2H, benzo), 7.68 (m, 2H, -Ph), 7.61 (m, 4H, -Ph), 7.55 (m, 2H, benzo), 7.52 (m, 2H, benzo), 7.44 (m, 2H, benzo), 7.12 (m, 2H, benzo), 6.88 (m, 2H, -Ph), 6.52 (m, 1H, \(^6\)Ph), 6.40 (m, 2H, benzo), 6.28 (m, 2H, \(^5\)Ph) 4.01 (m, 2H, \(^4\)Ph) ppm); \(^{11}\)B NMR (128 MHz, CDCl\(_3\)): \(\delta\) -11.7 (ppm); \(^{13}\)C NMR (128 MHz, CDCl\(_3\)): \(\delta\) 144.4, 143.5, 143.2, 140.0, 139.0, 135.9, 135.4, 134.5, 133.9, 131.5, 131.5, 130.9, 130.8, 130.7, 130.6, 130.5, 129.7, 129.0, 127.7, 127.5, 127.3, 126.9, 125.9, 125.6, 122.2 (ppm); HRMS (ESI-TOF): calcd for C\(_{58}\)H\(_{37}\)BN\(_3\) [M-BF\(_4\)]\(^+\) 785.3117, found 785.3117.
