Electronic Supplementary Information (ESI)

Experimental details

Materials: Acryloyl chloride (≥97%) and 2-hydroxyethyl disulfide (90%) were purchased from Sigma-Aldrich. The bis(2-acryloyl)oxyethyl disulfide (disulfide-based diacrylate, DSDA, ≥95%) was synthesized according to literature. Styrene (≥95%), ethylene glycol dimethacrylate (EGDMA, 98%), divinylbenzene (DVB 80%) was purchased from Sigma-Aldrich. Monomers were passed through a column to remove inhibitors. The chloroform (CHCl₃, ≥99%, Aldrich) and 1,1′-azobis(cyclohexanecarbonitrile) (ACHN, 98%, Aldrich) were used as the initiator. Pentamethyldiethylenetriamine (PMDETA, 99%, Aldrich), triethylamine (TEA, 99%, Aldrich), copper (I) chloride (CuCl, 99%, Aldrich), copper (II) chloride (CuCl₂, 99%, Aldrich), L-ascorbic acid (AA, 99%, Aldrich), tributylphosphine (Bu₃P 97% Aldrich), d-chloroform (99.8%, Aldrich), 2-butane (HPLC grade, Aldrich), toluene (HPLC grade, Aldrich), tetrahydrofuran (THF, HPLC grade, Aldrich), n-hexane (ACS reagent grade, Aldrich), diethyl ether (ACS reagent grade, Aldrich) and dichloromethane (DCM, ACS reagent grade, Aldrich) were used as received.

FRP of styrene: Styrene (25 mmol, 1 equiv), CHCl₃ (25 mmol, 1 equiv) and toluene (5.2 ml) were added into the flask and oxygen was removed by bubbling argon through the solutions for 20 min at room temperature. ACHN (0.1 mmol, 0.004 equiv) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

ARGET of styrene: Styrene (25 mmol, 1 equiv), CHCl₃ (25 mmol, 1 equiv), CuBr₂ (0.1 mmol, 0.004 equiv), PMDETA (0.1 mmol, 0.004 equiv) and toluene (5.2 ml) were added into the flask and oxygen was removed by bubbling argon through the solutions for 20 min at room temperature. AA (0.1 mmol, 0.004 equiv, 100% of CuCl₂) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

ATRA1 of styrene: Styrene (25 mmol, 1 equiv), CHCl₃ (25 mmol, 1 equiv) and toluene (5.2 ml) were added into the flask and oxygen was removed by bubbling argon through the solutions for 20 min at room temperature. CuCl (0.1 mmol, 0.004 equiv) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

FRP of methyl methacrylate (MMA): MMA (25 mmol, 1 equiv), CHCl₃ (25 mmol, 1 equiv) and 2-butane (5.4 ml) were added into the flask and oxygen was removed by bubbling argon through the solutions for 20 min at room temperature. ACHN (0.1 mmol, 0.004 equiv) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

ATRA1 of MMA: MMA (25 mmol, 1 equiv), CHCl₃ (25 mmol, 1 equiv), PMDETA (0.1 mmol, 0.004 equiv) and 2-butane (5.4 ml) were added into the flask and oxygen was removed by bubbling
argon through the solutions for 20 min at room temperature. CuCl (0.1 mmol, 0.004 equiv) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

**ATRA2 of MMA:** MMA (25 mmol, 1 equiv), CHCl₃ (25 mmol, 1 equiv), PMDETA (0.2 mmol, 0.008 equiv) and 2-butane (5.4 ml) were added into the flask and oxygen was removed by bubbling argon through the solutions for 20 min at room temperature. CuCl (0.2 mmol, 0.008 equiv) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

**In situ ATRA of MMA:** MMA (25 mmol, 1 equiv), CHCl₃ (25 mmol, 1 equiv), CuCl₂ (0.625 mmol, 0.025 equiv), PMDETA (0.625 mmol, 0.025 equiv) and 2-butane (5.4 ml) were added into the flask and oxygen was removed by bubbling argon through the solutions for 20 min at room temperature. AA (0.047 mmol, 0.00188 equiv, 7.5% of CuCl₂) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

**Preparation of hyperbranched polyDVB:** DVB (25 mmol, 1 equiv), CHCl₃ (12.5 mmol, 0.5 equiv), PMDETA (0.1 mmol, 0.004 equiv) and toluene (4.7 ml) were added into the flask and oxygen was removed by bubbling argon through the solutions for 20 min at room temperature. CuCl (0.1 mmol, 0.004 equiv) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

**Preparation of hyperbranched polyEGDMA:** Ethylene glycol dimethacrylate (EGDMA, 20 mmol, 1 equiv), 2-butane (8.1 ml), CHCl₃ (10 mmol, 0.5 equiv), CuCl₂ (0.5 mmol, 0.025 equiv) and PMDETA (0.5 mmol, 0.025 equiv) were added into the flask and oxygen was removed by bubbling argon through the solutions for 20 min at room temperature. AA (0.0375 mmol, 0.00188 equiv, 7.5% of CuCl₂) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

**Preparation of hyperbranched polyDSDA:** Bis(2-acryloyloxyethyl disulfide (disulfide-based diacrylate, DSDA, 20 mmol, 1 equiv), 2-butane (8.2 ml), CHCl₃ (10 mmol, 0.5 equiv), CuCl₂ (0.5 mmol, 0.025 equiv) and PMDETA (0.5 mmol, 0.025 equiv) were added into the flask and oxygen was removed by bubbling argon through the solutions for 20 min at room temperature. AA (0.0375 mmol, 0.00375 equiv, 7.5% of CuCl₂) was carefully transferred into the flask under an argon blanket. The solution was stirred at 800 rpm and the polymerization was conducted at 60 °C in an oil bath for the desired reaction time.

**Size exclusion chromatography (SEC) characterizations:** Weight average molecular weight (Mₙ), number average molecular weight (Mₐ) and polydispersity (Mₙ/Mₐ) were obtained by SEC (Varian 920-LC) equipped with an RI and an LS detector. The columns (30 cm PLgel Mixed-C, two in series) were eluted using tetrahydrofuran (THF) and calibrated using a series of 12 near-monodisperse PMMA standards (Mₚ from 690 to 1,944,000 gmol⁻¹). The polymers were analyzed in THF at a concentration of 5.0 mg/ml. All calibrations and analysis were performed at 40 °C and a flow rate of 1 ml/min.

**¹H NMR characterizations:** ¹H NMR analysis was carried out on a S4 300 MHz Bruker NMR with JEOL Delta v5.0.1 processing software. The chemical shifts were referenced to the lock chloroform (7.26 ppm).

**Scheme S1** Scheme depicting the dependence of mono-adduct formation on the Cu(I) to Cu(II) ratio.
