1. Materials and Methods

4-Phenoxyphenol was purchased from Sigma-Aldrich. Thermogravimetric analysis were performed on Perkin Elmer TGA 7 using a 10 °C.min⁻¹ heating rate under a nitrogen atmosphere with a 50 ml.min⁻¹ flow rate. X-ray powder diffraction experiments were carried out on a PanAlytical instrument using Cu-Kα radiation (λ = 1.5418 Å). Attenuated total reflection infrared spectroscopy (ATR-IR) was carried out on a Thermo Nicolet instrument using the Smart Golden Gate ATR attachment.

2. Single-Crystal X-Ray Diffraction

Intensity data were collected on a Bruker DUO CCD diffractometer using graphite monochromated Mo-Kα radiation (λ = 0.71073 Å). The temperature of the crystals was controlled using an Oxford Cryostream Cooler. Data reduction was carried out by means of a standard procedure using the APEX II software. Where necessary, systematic errors in the intensity data were corrected for using SADABS. The structures were solved by direct methods using SHELXS-97. All atoms were located by this method. All ordered non-hydrogen atoms were refined anisotropically by means of full-matrix least squares calculations on F² using SHELXL-97 within the X-Seed² environment. Where appropriate, hydrogen atoms were placed in calculated positions using riding models and assigned isotropic thermal parameters 1.2 times those of their parent atoms for aromatic C. All phenol hydrogen atoms were located in the difference electron density maps and their isotropic thermal parameters were refined freely. Molecular graphics were produced using the program POV-Ray.

Crystal data for 2-vac·293K: C₁₂H₁₀O₂, M = 186.20, colourless rod, 0.40 × 0.20 × 0.20 mm³, trigonal, space group R-3 (No. 148), a = b = 29.2571(16) Å, c = 5.9378(3) Å, V = 4401.7(4) Å³, Z = 18, Dc = 1.264 g/cm³, F₀₀₀ = 1764, Bruker Duo CCD Area Detector, MoKα radiation, λ = 0.71073 Å, θ max = 64.6°, 22590 reflections collected, 3483 unique (R int = 0.0418). Final GooF = 0.999, R1 = 0.0506, wR2 = 0.1192, R indices based on 2001 reflections with I >2σ(I) (refinement on F²), 131 parameters, 0 restraints. Lp and absorption corrections applied, μ = 0.086 mm⁻¹.

Crystal data for 2-vac·100K: C₁₂H₁₀O₂, M = 186.20, colourless rod, 0.40 × 0.20 × 0.20 mm³, trigonal, space group R-3 (No. 148), a = b = 29.0785(18) Å, c = 5.8540(4) Å, V = 4286.7(5) Å³, Z = 18, Dc = 1.298 g/cm³, F₀₀₀ = 1764, Bruker Duo CCD Area Detector, MoKα radiation, λ = 0.71073 Å, θ max = 67.7°, 22841 reflections collected, 3691 unique (R int = 0.0418).
Final $GooF = 1.035$, $R_I = 0.0430$, $wR2 = 0.1092$, $R$ indices based on 2923 reflections with $I > 2\sigma(I)$ (refinement on $F^2$), 131 parameters, 0 restraints. $Lp$ and absorption corrections applied, $\mu = 0.088$ mm$^{-1}$.

Crystal data for $2\cdot 36\% CO_2$: $C_{12.05}H_{10}O_{2.11}$, $M = 188.55$, colourless needle, $0.40 \times 0.10 \times 0.10$ mm$^3$, trigonal, space group $R-3$ (No. 148), $a = b = 29.000(4)$, $c = 5.8505(8)$ Å, $V = 4260.9(10)$ Å$^3$, $Z = 18$, $D_c = 1.323$ g/cm$^3$, $F_{000} = 1785$, Bruker Duo CCD Area Detector, MoK$\alpha$ radiation, $\lambda = 0.71073$ Å, $T = 100(2)$K, 10595 reflections collected, 2149 unique ($R_{int} = 0.1032$). Final $GooF = 1.026$, $R_I = 0.0522$, $wR2 = 0.1072$, $R$ indices based on 1303 reflections with $I > 2\sigma(I)$ (refinement on $F^2$), 136 parameters, 0 restraints. $Lp$ and absorption corrections applied, $\mu = 0.090$ mm$^{-1}$.

Crystal data for $2\cdot 73\% CO_2$: $C_{12.12}H_{10}O_{2.24}$, $M = 191.55$, colourless needle, $0.40 \times 0.10 \times 0.10$ mm$^3$, trigonal, space group $R-3$ (No. 148), $a = b = 28.906(10)$, $c = 5.862(2)$ Å, $V = 4242(3)$ Å$^3$, $Z = 18$, $D_c = 1.350$ g/cm$^3$, $F_{000} = 1812$, MoK$\alpha$ radiation, $\lambda = 0.71073$ Å, $T = 100(2)$K, $2\theta_{max} = 54.9^\circ$, 10595 reflections collected, 2172 unique ($R_{int} = 0.0961$). Final $GooF = 1.014$, $R_I = 0.0500$, $wR2 = 0.1255$, $R$ indices based on 1407 reflections with $I > 2\sigma(I)$ (refinement on $F^2$), 137 parameters, 0 restraints. $Lp$ and absorption corrections applied, $\mu = 0.093$ mm$^{-1}$.

Crystal data for $2\cdot CO_2$: $C_{12.17}H_{10}O_{2.33}$, $M = 193.53$, colourless needle, $0.40 \times 0.08 \times 0.08$ mm$^3$, trigonal, space group $R-3$ (No. 148), $a = b = 28.908(6)$, $c = 5.8899(12)$ Å, $V = 4262.6(15)$ Å$^3$, $Z = 18$, $D_c = 1.357$ g/cm$^3$, $F_{000} = 1830$, Bruker Duo CCD Area Detector, MoK$\alpha$ radiation, $\lambda = 0.71073$ Å, $T = 100(2)$K, $2\theta_{max} = 55.1^\circ$, 15769 reflections collected, 2172 unique ($R_{int} = 0.0961$). Final $GooF = 1.014$, $R_I = 0.0500$, $wR2 = 0.1255$, $R$ indices based on 1407 reflections with $I > 2\sigma(I)$ (refinement on $F^2$), 137 parameters, 0 restraints. $Lp$ and absorption corrections applied, $\mu = 0.093$ mm$^{-1}$.

Fig. S1 Thermal ellipsoid plot of $2\cdot CO_2$ shown at 50% probability. The asymmetric unit is labelled.
3. Powder X-Ray Diffraction

**Fig. S2** A comparison of the powder pattern of sublimed 2 used for gas sorption experiments and a pattern simulated from 2·vac·293K.

4. Gravimetric Gas Sorption

Gravimetric sorption isotherms were measured using an Intelligent Gravimetric Analyser (IGA-002) supplied by Hiden Analytical (Ltd), Warrington, UK. Only ultra-high purity gasses were used. The pressure is monitored using a pressure transducer with a range of 0-20 bar and buoyancy effects are corrected for automatically by the control software. Temperature control is maintained to an accuracy of +/- 0.05 K using a Grant refrigerated recirculating bath.
