I. General information

All reagents were purchased from commercial sources and used without treatment, unless otherwise indicated. The products were purified by column chromatography over silica gel. superscript 1\textsuperscript{H}-NMR and superscript 13\textsuperscript{C}-NMR spectra were recorded at 25 °C on a Varian 300 MHz or 400 MHz and 100 MHz spectrometer, respectively, and TMS was used as internal standard. Mass spectra were recorded on BRUKER AutoflexIII Smartbeam MS-spectrometer. High resolution mass spectra (HRMS) were recorded on Bruck microTof by using ESI method.

II. Synthesis and analytical data of compounds 3

Typical synthetic procedure (with 3a as an example): To a solution of \(\alpha\)-diazo-\(\beta\)-oxoamide (1a) (1.0 mmol) and ethyl isocynoacetate (0.5 mmol) in acetic acid (4.0 mL) was added Cu(OAc)\textsubscript{2} (0.1 mmol) in one portion at 100 °C under stirring. After being stirred for 5 hours, the reaction mixture was cooled to room temperature and saturated aqueous NaCl solution (20 mL) was added under stirring. The mixture was extracted with dichloromethane (3 × 20 mL) and the combined organic phase was washed with water (3 × 20 mL), dried over MgSO\textsubscript{4}, filtered, and concentrated under vacuum. Purification of the crude product by flash column chromatography (silica gel; petroleum ether: ethyl acetate = 8 : 1) gave 3a in 83% yield as a white solid.
