Supporting information

Solvothermal assembly of a mixed-valence Cu(I,II) cyanide coordination polymer \([\text{Cu(II)Cu(I)}_2(\mu-\text{Br})_2(\mu-\text{CN})_2(\text{bdmpp})]_n\) by C-C bond cleavage of acetonitrile

Table of Contents

**Figure S1.** Perspective view of the molecular structure of [CuBr$_2$(bdmpp)] with labelling scheme and 30% thermal ellipsoids. All hydrogen atoms were omitted for clarity. ................................................................. S3

**Figure S2.** The TGA-DTA plot of the ligand bdmpp. ....................................................................................... S4

**Figure S3.** The TOF mass spectrum of the yellow solution formed from the solvothermal reactions of CuBr with bdmpp in MeCN. ............................................................................................ S5

**Figure S4.** Experimental (down) and simulated (up) PXRD patterns for 1. ......................................................... S6

**Figure S5.** Experimental (down) and simulated (up) PXRD patterns for 2. .......................................................... S7
