c College of Engineering, Mathematics and Physical Sciences, University of Exeter, Exeter EX4 4QF, UK

Figure S1  High-magnification SEM images of the as-synthesized products, revealing that they exhibit belt-like structures with widths from 300 to 1200 nm and width/ thickness ratios from 3 to 8.
Figure S2  (a) XRD pattern (b) EDS pattern of the products formed on the carbon felt substrate without using Ni catalyst.

Figure S3  EDS pattern of the nanorods, reveals that they are Si₃N₄.
