Supporting Information for:

Nanocrystal Formation and Polymorphism of Glycine

Xiaochuan Yang, Allan S. Myerson

1Department of Chemical Engineering, Massachusetts Institute of Technology

Table of Contents

Patterns by lithography methods..................................................................................................S2
Calculated XRPD patterns of glycine.........................................................................................S3
Patterns made by photolithograph and electron beam lithography:

**Figure 1.** The left image shows patterns of 500 nm and 1 µm, while the right image exhibits enlarged patterns of 1 µm.
Figure 2. Calculated XRPD patterns for glycine.
