Figure S1: UV-vis absorption spectrum for 2 in dichloromethane.

Figure S2: Powder X-ray diffraction patterns of radical 2
**Figure S1**: UV-vis absorption spectrum for 2 in dichloromethane.

**Figure S2**: Powder X-ray diffraction patterns of radical 2 at room temperature: red points are observed pattern and black line is refined profile with FullProf program in profile matching mode. Vertical tics are refined Bragg peak positions in P-1 triclinic space group with $a = 4.0642(1)$, $b = 11.1503(3)$, $c = 12.8947(3)$ Å, $\alpha = 104.742(1)$, $\beta = 94.342(32)$, $\gamma = 94.131(2)^\circ$.
