Electronic Supplementary Information

Lithographically-Featured Photonic Microparticles of Colloidal Assemblies

Su Yeon Lee, Shin-Hyun Kim, Chul-Joon Heo, Hyerim Hwang, and Seung-Man Yang*

National Creative Research Initiative Center for Integrated Optofluidic Systems and Department of Chemical and Biomolecular Engineering, Korea Advanced Institute of Science and Technology, Daejeon, 305-701 Korea
Figure S1. (a) SEM image of the top hexagonal array of colloidal crystal trapped at the interface between air and SU-8. (b) The schematic diagram for contact angle measurement.

\[
\theta = \sin^{-1}\left(\frac{r}{R}\right) = 58.1^\circ
\]

Figure S2. (a, b) The reflectance spectra and the corresponding optical microscope images of opal, composite, and inverse-opal structures prepared with monodisperse silica particles of 245 nm and 340 nm in diameter, respectively.
Figure S3. Schematic illustration for diffraction of photonic microparticles in the vial.
