Electronic Supplementary Information for

Photoinduced Electron Transfer in Supramolecular Donor-Acceptor dyad of Zn Corrphycene

Mamoru Fujitsuka, Hisashi Shimakoshi, Yui Tei, Kazumasa Noda, Sachiko Tojo, Yoshio Hisaeda, and Tetsuro Majima

Fig. S1 (a) Optimized structure, (b) HOMO, and (c) LUMO of PI-ZnCn calculated using DFT at B3LYP/6-31G(d) level. For simplicity of the calculation, alkyl groups of the compounds were reduced to methyl groups.
Fig. S2 (a) Transient absorption spectra of ZnCn (0.37 mM) and Py-ZnCn (ZnCn: 0.37 mM, Py: 4.1 mM) in toluene at 2 ps after laser excitation during the laser flash photolysis using 560-nm femtosecond laser pulse.
Fig. S3 (a) Transient absorption spectra of PI-ZnCn (ZnCn: 0.37 mM, PI: 3.7 mM) in toluene during the laser flash photolysis using 560-nm femtosecond laser pulse for excitation. (b) Kinetic trace of ΔO.D. at 709 nm during the laser flash photolysis. Red curve is a fitted curve.
