Supporting Information

Figure A. Triplet-bond angle distributions for (a) N–H–O1/2 hydrogen bonds between EAF ions and (b) OEC–H/0–OEC hydrogen bonds between glycerol molecules. (c) N–H–OEC hydrogen bonds between EAC+ cations and glycerol and (d) OEC–H/0–O1/2 hydrogen bonds between glycerol and formate. Coloured data points represent hydrogen bonds angle distributions in the EAF/glycerol mixture and dashed lines represent the corresponding distributions in the pure liquids.
