Figure S1. Weight loss (solid lines) and its derivative (dashed lines) curves via TGA for the pure silica particles and SOS particles.
Figure S2. FE-SEM micrographs of hollow silica particles obtained under the absence of AIBN when the heating time of keeping 70 °C was A) 0 h, B) 1 h

Figure S3. (A) FE-SEM photos, (B) TEM image, (C) static water contact angle of the particulate film of SOS obtained with KPS initiator.
Figure S4. BET measurement of N\textsubscript{2} adsorption/desorption isotherms of HOS particles. The inset is the pore size distribution.
