General information

All chemicals of the reagent grade or higher purity level were purchased from Sigma Aldrich, Alfa Aesar, and Acros Organics and used without further purification unless otherwise noted. Granulated CaC\textsubscript{2} of the technical grade purity (>75\%) was purchased from Sigma Aldrich. NMR spectra were recorded on a Bruker Avance 400 (\textsuperscript{1}H 400 MHz; \textsuperscript{13}C 101 MHz) and a Bruker Avance 500 (\textsuperscript{1}H 500 MHz; \textsuperscript{13}C 126 MHz) spectrometers. Chemical shifts \(\delta\) are reported in ppm relative to residual CHCl\textsubscript{3} (\textsuperscript{1}H, \(\delta = 7.26\)) or DMSO (\textsuperscript{1}H, \(\delta = 2.50\)) and CDCl\textsubscript{3} (\textsuperscript{13}C, \(\delta = 77.16\)) or DMSO-\textsubscript{d}\textsubscript{6} (\textsuperscript{13}C, \(\delta = 39.52\)) as internal standards. High-resolution mass spectra (HRMS) were recorded on a Bruker micrOTOF spectrometer using electrospray ionization (ESI). The reactions were monitored by TLC analysis using Merck UV-254 plates. Flash chromatography was performed using Merck silica gel 60 (230–400 Mesh). Before vinyl ethers purification, silica gel was neutralized with triethylamine.

Sequential Vinylation of 2l

A reaction tube was loaded with alcohol 1l (1.0 mmol), KOH (1.25 mmol, 69 mg), KF (4.0 mmol, 232 mg) and calcium carbide (2.0 mmol, 128 mg). DMSO (1.5 mL) and H\textsubscript{2}O (4.0 mmol, 72 \(\mu\)L) were added, the tube was immediately sealed, and the mixture was stirred at 130 °C for 3 h. After cooling to 25 °C, the mixture was extracted with hexane (6 \(\times\) 3 mL), the collected hexane layers were concentrated under reduced pressure and the residue was placed in a reaction tube containing new portions of the reagents. DMSO and water were added, the tube was sealed and the mixture was stirred at 130 °C for 3 h. After cooling to 25 °C the action was repeated again. After three consecutive vinylations the product was purified from residual 1l by flash chromatography.
