Figure S1. Illustration of the fabrication of azo-alumina line pattern by solvent-assisted imprint lithography
**Figure S2.** SEM images of the azo-alumina line array produced by solvent-assisted micro-molding.

**Figure S3.** SEM images of a) the mushroom-geometry line array after the initial light fluence and b) the heat-treated line array; note that the azo-alumina is not fully adhere to the substrate after the initial light fluence but the line array makes conformal contact after the heat-treatment.
