Fig. S6. $^1$H NMR spectra (400 MHz, C$_6$D$_6$) showing the progress of a cycloisomerization reaction catalyzed by 4. Ph$_3$SiCH$_3$ is also included as an internal integration standard. The initial spectrum (A) was obtained just as the reaction mixture was allowed to warm to room temperature and specific starting material peaks are labeled. Spectrum B was obtained after maintaining the reaction temperature at 60 °C for 11 hours. Spectrum C was obtained after a total of 22 hours at 60 °C. The starting material has been consumed and specific product peaks are labeled.
