Contents

1. Typical Steric Exclusion Chromatograph for the polycaprolactone S2
2. Correlation between the m/z observed by MALDI-TOF S3
3. $^{13}$C{^1}H} experiments for the methyne carbone for the polylactides S4
Figure ESI 1. SEC traces of entries 3 (dark grey) and 6 (light grey) (see Table 1). The dashed line represents the upper limit for the integration when determining the $M_n$ and $M_w$ of the polymers.
**Figure ESI 2.** Correlation between the \( m/z \) observed by MALDI-TOF. The relation observed is \( m/z = 114.3 \, N + 1000 \) \((R^2 = 1.00)\), where \( N \) is the number of repetition units.
Figure ESI 3. $^{13}$C–$^1$H experiments for the methyne carbene for the polylactides obtained from catalyst 6.
