Tunability of the $\text{M}^{\text{II}}\text{M}^{\text{III}}/\text{M}^{\text{II}}_2$ and $\text{M}^{\text{III}}_2/\text{M}^{\text{II}}\text{M}^{\text{III}}$ ($\text{M} = \text{Mn, Co}$) couples in bis-$\mu$-$\text{O},\text{O}'$-carboxylato-$\mu$-$\text{OR}$ bridged complexes

Supporting Information

Figure S1 Linear correlation of the sum of the Hammett constants used from reference 18. Values used for $\rho_p$ are: H = 0, CH$_3$ = -0.17, CF$_3$ = 0.54, CH$_2$NMe$_2$ = 0.07, SO$_2$NMe$_2$ = 0.65. The bpbp $^\prime$ and bpsmp $^\prime$ series differ by a constant factor, showing that this method is not exact, e.g. the $^\prime$Bu vs Me substituent is not taken into account.
