Electronic Supplementary Information

Ni(II) and Pd(II) pyridinyl oxazolidine-compounds: synthesis, X-ray characterisation and catalytic activities in the aza-Michael reaction

G. Attilio Ardizzoia, Stefano Brenna,* and Bruno Therrien

Table of contents

# Figs. S1-S3  \(^{1}\)H and \(^{13}\)C NMR spectra of ligand \(\text{ppo}\)
# Figs. S4-S6  \(^{1}\)H and \(^{13}\)C NMR spectra of complex 1
# Fig. S7     \(^{1}\)H NMR spectrum (CD\(_2\)Cl\(_2\), RT) of complex 2
# Figs. S8-S11 Magnetic moment measurements conducted on compound 2 via \(^{1}\)H NMR solution at different temperatures, in CD\(_2\)Cl\(_2\)
# Figs. S12-S15 Magnetic moment measurements conducted on compound 2 via \(^{1}\)H NMR solution at different temperatures, in CD\(_3\)OD
# Fig. S16    Absolute energy of the five possible isomers of [Ni(ppo)\(_2\)Cl\(_2\)]
# Figs. S17-S19 Mass spectra of the products of aza-Michael reactions
Fig. S1. $^1$H NMR (CDCl$_3$, 298 K) of ligand ppo

Fig. S2. $^{13}$C NMR (CDCl$_3$, 298 K) of ligand ppo
Fig. S3. $^1$H-$^{13}$C HETCOR (CDCl$_3$, 298 K) of ligand ppo

Fig. S4. $^1$H NMR (CD$_3$CN, 298 K) of complex [Pd(N,N'-ppo)Cl$_2$] (I)
**Fig. S5.** $^{13}$C NMR (CD$_3$CN, 298 K) of complex [Pd(N,N'-ppo)Cl$_2$] (1)

![Fig. S5. $^{13}$C NMR (CD$_3$CN, 298 K) of complex [Pd(N,N'-ppo)Cl$_2$] (1)](image-url)

**Fig. S6.** $^1$H-$^{13}$C HETCOR (CD$_3$CN, 298 K) of complex [Pd(N,N'-ppo)Cl$_2$] (1)

![Fig. S6. $^1$H-$^{13}$C HETCOR (CD$_3$CN, 298 K) of complex [Pd(N,N'-ppo)Cl$_2$] (1)](image-url)
**Fig. S7.** $^1$H NMR (CD$_2$Cl$_2$, RT) of complex [Ni($N$-$O$-ppo)$_2$Cl$_2$] (2)

**Fig. S8.** Magnetic moment of compound 2 via $^1$H NMR (Evans’ method), in CD$_2$Cl$_2$/toluene, at 298 K.

**Fig. S9.** Magnetic moment of compound 2 via $^1$H NMR (Evans’ method), in CD$_2$Cl$_2$/toluene, at 273 K.
**Fig. S10.** Magnetic moment of compound 2 via $^1$H NMR (Evans’ method), in CD$_2$Cl$_2$/toluene, at 228 K.

**Fig. S11.** Magnetic moment of compound 2 via $^1$H NMR (Evans’ method), in CD$_2$Cl$_2$/toluene, at 308 K.
Fig. S12. Magnetic moment of compound 2 via $^1$H NMR (Evans’ method), in CD$_3$OD/toluene, at 298 K.

![NMR spectrum of compound 2 at 298 K.]

Fig. S13. Magnetic moment of compound 2 via $^1$H NMR (Evans’ method), in CD$_3$OD/toluene, at 273 K.

![NMR spectrum of compound 2 at 273 K.]

Fig. S14. Magnetic moment of compound 2 via $^1$H NMR (Evans’ method), in CD$_3$OD/toluene, at 228 K.

![NMR spectrum of compound 2 at 228 K.]
**Fig. S15.** Magnetic moment of compound 2 via $^1$H NMR (Evans’ method), in CD$_3$OD/toluene, at 308 K.

**Fig. S16.** Absolute energy of the five possible isomers of [Ni(ppo)$_2$Cl$_2$]. (ttt-[Ni(ppo)$_2$Cl$_2$] opt: complex 2 optimized in vacuum or acetonitrile)
**Fig. S17.** Conjugate addition of piperidine to benzalacetone catalysed by complexes 1 and 2: mass spectrum of the product (calc. for M\(^+\): m/z = 231.16).

**Fig. S18.** Conjugate addition of morpholine to benzalacetone catalysed by complexes 1 and 2: mass spectrum of the product (calc. for M\(^+\): m/z = 233.14).
**Fig. S19.** Conjugate addition of dimethylamine to benzalacetone catalysed by complexes 1 and 2: mass spectrum of the product (calc. for M$: m/z = 191.13$).
