Supplementary information for the manuscript:

Assessing the long term impact of power plants emissions on regional air pollution using extensive monitoring data

Yuval, David M. Broday

November 2, 2008
Figure S1: (upper panel) The daily cycles of the mean SO\textsubscript{2} concentration (µg m\textsuperscript{-3}) in station 1. (lower panel) The daily cycle of the mean NO\textsubscript{2} (squares) and mean O\textsubscript{3} (stars) concentrations (µg m\textsuperscript{-3}) in station 1.

Figure S20: (upper panel) Mean SO$_2$ concentration ($\mu$g m$^{-3}$) as a function of the representative wind direction sectors in station 1. The two curves are for period 1 (x-marks, 1 Jan 2000 to 31 Jan 2004) and for period 2 (circles, 1 Feb 2004 to 31 dec 2006). (lower panel) Mean NO$_2$ (squares) and O$_3$ (stars) concentration ($\mu$g m$^{-3}$) as a function of the representative wind direction sectors during the whole study period. The directions from power stations Rotenberg (dashed), Eshkol (continuous) and Tzafit (sectioned) to each station are shown as vertical lines in the two panels.
