Fig. S1. Molecular structures of Dechlorane (Mirex), Dechlorane 602, Dechlorane 603, Dechlorane 604, Dechlorane Plus, pentabromoethylbenzene, and 1,2-bis(2,4,6-tribromophenoxy)ethane (BTBPE).
Fig. S2. All concentrations of PBEB, $\sum$PBDEs (tri-BDEs to hepta-BDEs), BDE 209 Dec 602, Dechlorane, and DP in surficial sediment collected from Dalian. The bottom and top of the boxes represent the 25$^{th}$ and 75$^{th}$ percentiles of values, respectively. The solid horizontal line within each box represents the median value. The little box within each box represents the mean value. The lower whisker is equal to the minimum values. The upper whisker is equal to the maximum values.
