We gratefully acknowledge Dr. T. E. Weirich and C. Herwartz for performing the TEM measurements.
**General Methods.** Unless otherwise noted, all commercially available compounds were used as received. TiO$_2$ was supplied by Sigma-Aldrich, product code: 718467. Analytical grade solvents used for reaction were dried and distilled prior to use. Analytical thin-layer chromatography (TLC) was performed on Merck silica gel 60 aluminium plates with F-254 indicator, visualized by UV irradiation. Column chromatography was performed using MN silica gel (particle size 0.040-0.063 mm). $^1$H-NMR and $^{13}$C-NMR were recorded on a Mercury 300, Inova 400 or VNMRS-600 spectrometer in CDCl$_3$ or toluene-$d_8$ with residual proton signal of the deuterated solvents as the internal reference ($\delta_H = 7.26$ ppm and $\delta_C = 77.00$ ppm for CDCl$_3$) or TMS as internal reference. Data are reported in the following order: chemical shift ($\delta$) in ppm; multiplicities are indicated s (singlet), d (doublet), t (triplet), q (quartet), dd (doublet of doublets), td (triplet of doublets), tt (triplet of triplets), ddd (doublet of doublet of doublets), m (multiplet), p (pentet), s (sextet); coupling constants ($J$) are in Hertz (Hz). $^{13}$C NMR spectra were acquired on a broad band decoupled mode. Mass spectra was conducted on GC-MS Shimadzu QP2010 (column: Equity®-5, length × I.D. 30 m × 0.25 mm, $d_f$ 0.25 μm, lot # 28089-U, Supelco). HRMS were measured on a Finnigan MAT 95 or LTQ Orbitrap XL spectrometer. IR spectra were measured in a Perkin-Elmer ATR apparatus and are reported in terms of frequency of absorption (cm$^{-1}$).

**General procedure for the synthesis of compounds 3**

In a vial TiO₂ (12 mg, 0.15 mmol), amine 1 (0.3 mmol), isocyanide 2 (0.15 mmol) and H₂O (27 μL, 1.5 mmol) were dissolved in 1 mL of dioxane. The reaction mixture was stirred for 4 days under irradiation with an 11W lamp (distance app. 3 cm). After 4 days the solvent was removed under reduced pressure and the crude reaction mixture was directly charged on silica gel and purified by column chromatography (cyclohexane/EtOAc 8:2 to 6:4) to afford the corresponding product 3.
