Fig. S1. Upper: the gold amalgam; Bottom: the gold amalgam trapping micro-column.
Fig. S2. The variation of normalized emission intensity at 253.7 nm with the discharging voltage. Flow rate: 0.6 L min$^{-1}$, discharge frequency: 43 KHz, Hg$^{0}$ vapor concentration: 0.30 ppb.
Fig. S3. The dependence of the normalized Hg$^0$ emission intensity at 253.7 nm on the flow rate of the carrier gas. The discharging voltage: 100 V; discharge frequency: 43 KHz, the concentration of Hg$^0$ in the standard vapor: 0.30 ppb.
