

1,4;5,8-naphthalene-tetracarboxylic diimide Derivatives as Model Compounds for Molecular Layer Epitaxy

*Y. Ofir, A. Zelichenok, and Shlomo Yitzchaik**

*Department of Inorganic and Analytical Chemistry & the Center for Nanoscience and
Nanotechnology, The Hebrew University of Jerusalem, Jerusalem 91904, Israel*

Supporting Information

S1: Crystal packing of NTCDI-Dihexyl. A disorder in the last ethylene unit and an R-factor of 14% was received for this structure.
