Characterization of Two Distinctly Different Processes Associated with the 
Electrocrystallization of Microcrystals of Phase I, CuTCNQ (TCNQ=7,7,8,8-
tetracyanoquinodimethane)

Alexander R. Harris\textsuperscript{a}, Aaron K. Neufeld\textsuperscript{b*}, Anthony P. O’Mullane\textsuperscript{a}, Alan M. Bond\textsuperscript{a*}

\textsuperscript{a} School of Chemistry, Monash University, PO Box 23, Victoria, 3800, Australia
\textsuperscript{b} BlueScope Steel, Coatings Research, PO Box 202, Old Port Rd, Port Kembla, NSW, 2505, Australia.

Keywords: Electrocrystallization, CuTCNQ, film formation, nucleation-growth, voltammetry.

Supporting Information

Scanning Electron Microscopy images of CuTCNQ electrocrystallization after voltammetry.
Figure S1: Ex situ SEM images of CuTCNQ obtained after cyclic voltammetry with 9.09 mM Cu$^{+1}$ (MeCN) and 9.09 mM TCNQ in acetonitrile (0.1 M Bu$_4$NPF$_6$) onto a 3 mm diameter GC electrode with a scan rate of 100 mV s$^{-1}$ (a) 0.75 $\rightarrow$ -0.25 V (b) 0.75 $\rightarrow$ -0.25 $\rightarrow$ 0 V (c-d) 13 cycles of 0.75 $\rightarrow$ -0.25 V (e-f) 13 cycles of 0.75 $\rightarrow$ -0.25 $\rightarrow$ 0.75 V.
