Figure S1: Upper part – differential absorption spectra (near-infrared) obtained upon femtosecond flash photolysis (387 nm) of SWNT in THF with several time delays between 0 and 1500 ps (i.e., black – 0.02 ps; grey – 0.28 ps; brown – 0.92 ps; green – 1.22 ps; red – 1500 ps) at room temperature.
Figure S2: Upper part – differential absorption spectra (near-infrared) obtained upon femtosecond flash photolysis (387 nm) of MWNT in THF with several time delays between 0 and 2.5 ps (i.e., black – 0.02 ps; grey – 0.28 ps; brown – 0.92 ps; green – 1.22 ps; red – 2.5 ps) at room temperature. Lower part – time-absorption profiles of the spectra shown above at 1060 nm.
Figure S3: Upper part – differential absorption spectra (near-infrared) obtained upon femtosecond flash photolysis (387 nm) of TMWNT in THF with several time delays between 0 and 2.5 ps (i.e., black – 0.02 ps; grey – 0.28 ps; brown – 0.92 ps; green – 1.22 ps; red – 2.5 ps) at room temperature. Lower part – time-absorption profiles of the spectra shown above at 1060 nm.
