Experimental section:

General. All reagents and solvents were purchased from commercially available sources and used without further purification. All the reactions were performed under an inert atmosphere of nitrogen. ¹H NMR spectra were recorded on a JNM-EX400 spectrometer in deuterated chloroform. Chemical shifts are quoted in parts per million (ppm) and referenced to tetramethylsilane. The ¹³C NMR spectra were recorded at 100 MHz on the same spectrometer in deuterated chloroform. Chemical shifts were defined relative to the ¹³C resonance shift of chloroform (77.0 ppm). Fourier transform infrared (FT-IR) spectra were recorded on a JASCO FT/IR-300E spectrometer in the region of 4000-400 cm⁻¹ region by using KBr pellets. The UV absorption was determined with a SCINCO UV-vis S-2100 spectrometer. Elemental analyses were carried out on a FISONS EA-1108 Elemental Analyzer. High-resolution mass spectrometry was taken on a SD303 spectrometer. The phase transition behavior of the materials was examined by a different scanning calorimetry (DSC) using a TA Instruments DSC 2010. The heating and cooling rate was 5 °C/min. The reported temperatures are onset temperatures of first cooling. The polarizing optical microscopic images were taken on a Nikon ECLIPSE E600POL polarizing optical microscope with a LINKAM LTS 350 hot stage. The 1D WAXD experiments were conducted in the reflection mode of a Rigaku 12 kW rotating-anode X-ray (Cu K α radiation) generator coupled to a diffractometer. The diffraction peak positions and widths were calibrated with silicon crystals of known crystal size in the high 2θ-angle region (>15°) and silver behenate in the low 2θ-angle region. The cyclic voltammetry measurements were performed by Versa STAT3 of Princeton Applied Research in a solution of Bu₄NBF₄ (0.1 M) in water-free dichloromethane with a scan rate of 50 mV/s at room temperature. A glass carbon electrode, a Ag/AgCl electrode and a platinum wire were used as a working electrode, a reference electrode and a counter electrode, respectively.
