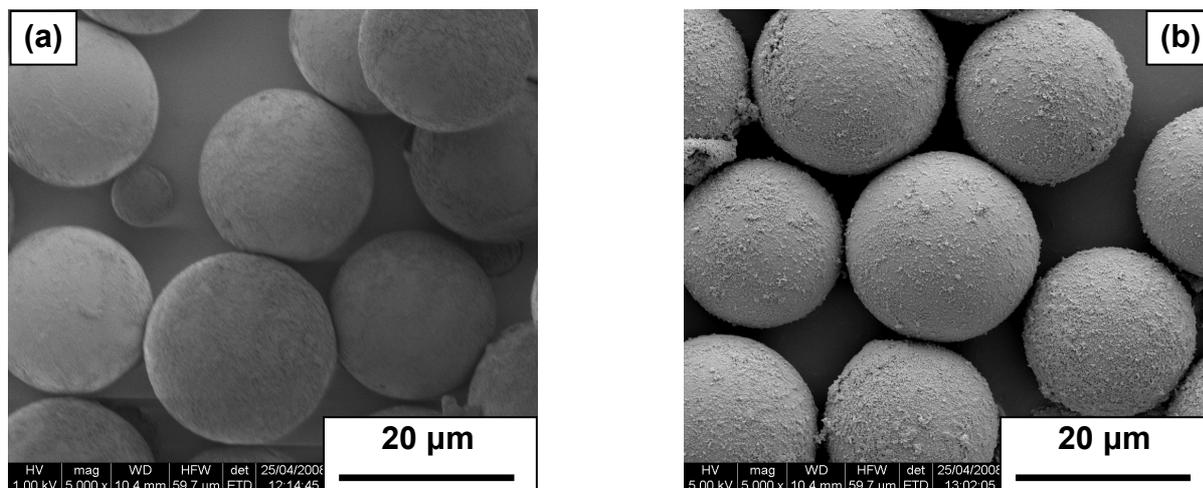

Figure 1S. Scanning electron microscopy images obtained for (a) pristine 20 μm PMMA latex and (b) the same latex coated with a 20 nm overlayer of chloride-doped polypyrrole. Note the increased surface roughness due to the presence of the conducting polymer coating.

Table 1S: Summary of Raman band positions and peak-widths observed for uncoated poly(methyl methacrylate) [PMMA], polypyrrole chloride bulk powder (PPyCl) and PPyCl-coated PMMA latex.

Raman peak position and width (cm^{-1})		
PMMA	PPyCl	PPyCl-coated PMMA
