Fabrication of multiwalled carbon nanotube-reinforced electrospun polymer nanofibers containing zero-valent iron nanoparticles for environmental applications

Shili Xiao, Mingwu Shen, Rui Guo, Qingguo Huang, Shanyuan Wang and Xiangyang Shi

Contents:
A magnified SEM image of MWCNT-incorporated PAA/PVA nanofibers, TGA curves of MWCNT-incorporated PAA/PVA nanofibrous mats before and after ZVI NP immobilization, and chemical structures of the selected model dyes.
Figure S1. Magnified SEM image of MWCNT-incorporated PAA/PVA nanofibers.

Figure S2. TGA curves of MWCNT-incorporated PAA/PVA nanofibrous mats before (a) and after (b) ZVI NP immobilization.
Figure S3. Chemical structures of the selected model dyes.
