2. ¹H, ¹³C and 2D NMR spectra ..............................................(Page 3 to 71)
General Information:

Proton and carbon NMR spectra were obtained on 400 MHz NMR spectrometer. Chemical shifts are reported as $\delta$ values in parts per million (ppm) as referenced to residual solvent. $^1$H NMR spectra are tabulated as follows: chemical shift, multiplicity (s = singlet, bs = broad singlet, d = doublet, t = triplet, q = quartet, m = multiplet), coupling constant(s), and number of protons.
