Supplementary Information

1) Electrospray mass spectra for the complexes fac-{Re(CO)3(Ln})(BF4) where n = 1,2.
Above left: Lifetime decay profile for L¹ in MeCN with \( \lambda_{\text{ex}} = 355 \) nm and \( \lambda_{\text{em}} = 397 \) nm. Above right: associated residuals following a data fit with two exponential components. The corresponding lifetimes are 0.3 (23 \%) and 119 ns (77 \%).

Above: CD titration using \textit{fac-} \{Re(CO)₃(L¹)\}(BF₄)
