ELECTRONIC SUPPLEMENTARY INFORMATION

for

Binding and recognition of AMP, ADP, ATP and related inorganic phosphate anions by protonated forms of a tren-based ligand containing a pyrimidine functionality

By
Paloma Arranz-Mascaros, Carla Bazzicalupi, Antonio Bianchi, Claudia Giorgi, Maria Luz Godino-Salido, Maria Dolores Gutiérrez-Valero, Rafael Lopez-Garzón and Barbara Valtancoli.

Figure S1. Distribution diagrams of the complexes formed by HL with phosphate, diphosphate and triphosphate. ........................................................................................................... S2
Figure S2. $^{31}$P NMR spectra of phosphate, diphosphate and triphosphate in the absence and in the presence of HL with CIS values. ............................................................... S3
Figure S3. Selectivity diagrams calculated for the system HL/AMP, HL/ADP e HL/ATP. ......... S4
Figure S1. Distribution diagrams of the complexes formed by HL with phosphate, diphosphate and triphosphate. All reagents $1 \times 10^{-3}$ M.
Figure S2. $^{31}$P NMR spectra of phosphate, diphosphate and triphosphate in the absence and in the presence of equimolar amounts of HL. CIS (for 100% complexation) are shown close to the picks.
Figure S3. Selectivity diagrams calculated for the system HL/AMP, HL/ADP e HL/ATP showing the percentage of the overall concentration of receptor bound to each nucleotide as a function of pH. The overall concentration of free ligand is also shown. All reagents $1 \times 10^3$ M.
