Supplementary information

Measurements Absorption and emission spectra were collected by using a Shimadzu 1750 UV-visible spectrometer and a RF-5301 fluorescence spectrometer (Japan), respectively. Cell images were performed on Olympus FV10-ASW 3.1 Viewer confocal microscope (Japan). NMR spectra were collected on a Bruker 500 AVANCE III spectrometer. Chemical shifts ($\delta$) were reported as ppm with TMS as the internal standard. Mass spectrometric (MS) data were obtained with Thermo Fisher LCQ Fleet. All experiments were performed in compliance with the relevant laws and institutional guidelines, and were approved by Northwest A\&F University.
