Supporting Information

Transmission data showing that the 72% contrast is achievable with 15 printed layers. The measurements were carried out at wavelength from 350 nm onwards. The 72% is found in Figure S1 at 633 nm wavelength for 15 printed layers of WO3.
Figure S1. UV-visible light transmission spectra for 15 printed WO$_3$ layers showing an ~72% contrast at 633 nm wavelength
