Fig. S1. 1H 600 MHz 2D ROESY NMR spectrum at 298 K of a D2O solution in which [3]total is 0.023 mol dm−3. There are no cross-peaks to indicate intramolecular complexation of the substituent.
Fig. S2. $^1$H 600 MHz 2D ROESY NMR spectrum at 298 K of a D$_2$O solution in which [4]$_{\text{total}}$ is 0.014 mol dm$^{-3}$. There are no cross-peaks to indicate the intramolecular complexation of the substituent.

Fig. S3. $^1$H 600 MHz 2D ROESY NMR spectrum at 298 K of a D$_2$O solution in which [3]$_{\text{total}}$ and [αCD]$_{\text{total}}$ are 0.022 mol dm$^{-3}$ and 0.032 mol dm$^{-3}$, respectively. There are no cross-peaks to indicate the intermolecular complexation of the substituent.
