Figure S1. Co-localization imaging of MCF-7 (top) and HaCat cells (bottom) loaded with 100 µM [Eu$_2$(L$^2$)$_3$] for 4 h, followed by a 30-min incubation with 1 µM ER-Tracker Blue-White DPX. (A) bright field; (B) fluorescence of ER-Tracker Blue-White DPX (Objective: Plan-fluor 100×; Excitation:365 nm (BP 80 nm) filter, emission: 450 nm (BP 65 nm) filter, exposure time: 2 s); (C) Eu$^{III}$ luminescence (excitation: 340 nm (BP 70 nm) filter; emission: 420-nm LP filter; excitation pulse length: 10 µs; delay time: 100 µs; gate time: 600 µs; exposure time: 30s); (D) merged images. (E) Densitometric traces along the path shown in D.
