Experimental Section:

General

All reactions were performed in round-bottom flask fitted with balloon filled with argon, otherwise specified. Transfer of air- and moisture-sensitive liquids was performed via cannula under a positive pressure of argon. TLC analysis was performed on Merck TLC (silica gel 60F254 on glass plate). Evaporation and condensation were carried out in vacuo. The compound 1\(^1\) and 5\(^2\) were prepared according to the literature. Silica gel 60N (spherical, neutral) manufactured by Kanto Chemical Co. Inc. was used for flash column chromatography. DMF and toluene were deoxygenated prior to use. Tetramethylammonium fluoride and methyl hydrazine were purchased from Tokyo Chemical Industry Ltd. Grubbs 1\(^{st}\) gen. catalyst, Grubbs 2\(^{nd}\) gen. catalyst, LHMDS (1.0 M THF solution) and 3-bromo-2-methyl-propene were purchased from Aldrich Chemical Company. Schrock’s catalyst was purchased from Strem Chemicals. 4-Bromo-1-butene was purchased from Alfa Aesar Company. (3\(^R\),4\(^R\))-4-Acetoxy-3-[(3\(^R\))-(tert-butyldimethylsilyloxy)ethyl]-2-azetidinone, allyl bromide and cesium carbonate were purchased from Wako Pure Chemical Industries Ltd. NaH was purchased from Nacalai Tesque Inc.

Melting points were measured by a Yanagimoto micromelting point apparatus (uncorrected). Optical rotation was recorded by Union PM-201 Automatic Digital Polarimeter (Horiba) at 28°C. IR spectra were measured on JASCO FT/IR-410 Fourier Transform Infrared Spectrometer. The \(^1\)H NMR, \(^13\)C NMR spectra or \(^77\)Se NMR spectra were measured on JEOL:JNM ECX-400P, JEOL:JNM ECA-500, JEOL:JNM ECA-600 spectrometers in CDCl\(_3\). Chemical shifts of protons are reported in \(\delta\) values referred to TMS as an internal standard, and the following abbreviations were used as follows: s: singlet, d: doublet, t: triplet, m: multiplet. The \(^77\)Se chemical shifts were expressed in \(\delta\) values deshielded with respect to neat Me\(_2\)Se. \(^1\)\(^J\)(\(^77\)Se-\(^1\)H) values are observed as \(^77\)Se satellites of the \(^1\)H NMR spectra. MS and HRMS were measured on a JEOL JMS-700.

**General Preparation of Se-alkene p-methylselenobenzoate (2):** To a solution of potassium p-methylselenobenzoate 1 (12.65 mmol) in degassed DMF (50 mL) was added alkyl bromide (18.97 mmol) under an argon atmosphere, and the mixture was stirred for 1 h (TLC; CHCl₃:n-hexane = 1:5). The reaction mixture was filtered through celite and washed with CHCl₃. The combined filtrate and washing were extracted with CHCl₃ and washed with water and brine. The organic layer was dried over Na₂SO₄ and concentrated. The resulted residue was purified with column chromatography on silica gel (CHCl₃:n-hexane = 1:15 → 1:10 → 1:5) to give 2.

**Method A:** To a suspension of NaH (60% in mineral oil, 2.07 mmol) in 5 mL of THF at 0 °C was added compound 3 (1.38 mmol) in 15 mL THF over 15 minutes. The resultant solution was stirred at -78 °C for 10 minutes. Alkyl bromide (2.76 mmol) was added over 5 minutes and the resulting mixture allowed to warm to ambient temperature overnight. The resulting mixture was quenched with 10% HCl and extracted with diethyl ether. The combined organic extracts were dried (Na$_2$SO$_4$) and concentrated *in vacuo* to afford a residue that was further subjected to flash chromatography (SiO$_2$: hexane / diethyl ether = 15/1) to afford the title compound 4 as clear oil.

a Isolated yields. b Corresponding diselenide was obtained as a byproduct.

Typical procedure for the synthesis of 4 and 7:

To a stirred solution of 6 (0.22 mmol) and alkyl bromide (2.23 mmol) in degassed dry DMF (2 mL) was added TBAF (1 M solution in THF, 0.56 mmol) at r.t. with argon bubbling to reaction mixture. The stirring was continued for above mentioned time and then reaction mixture extracted with chloroform and washed with water. The combined organic layers were dried (Na2SO4) and concentrated. The residue was purified by column chromatography (SiO2: hexane / diethyl ether = 15/1) to afford compounds 4, 7 or corresponding diselenide.

The isolated yield and the spectral data for 4, 7 and diselenide are as follows:
